

HTTP Error 503.2 - Service Unavailable

The serverRuntime@appConcurrentRequestLimit setting is being exceeded.

Most likely causes:

- Setting is too low.
- The application is taking too long for the current load.

Things you can try:

- Try increasing the value of the setting.
- Check that external resources (for example, disk, database, etc..) are performing at expected levels.
- Check that the application has not deadlocked.

Detailed Error Information:

| | | | |
|---------------------|-----------------------------------|----------------------|--|
| Module | IIS Web Core | Requested URL | http://172.16.37.3:81/NRecoReports/InterimStatement.aspx?LetterSerial=%2b1TtbJFAgekDQ%2bF%2bCNWw8Q%3d%3d |
| Notification | BeginRequest | Physical Path | D:\Websites\ReportServices\NRecoReports\InterimStatement.aspx |
| Handler | PageHandlerFactory-Integrated-4.0 | Logon Method | Not yet determined |
| Error Code | 0x00000000 | Logon User | Not yet determined |

More Information:

IIS will not allow more concurrent requests to an application than the serverRuntime@appConcurrentRequestLimit setting permits.
